#### Abstract

A portfolio is a collection of investments held by an institution or a private individual. In building up an investment portfolio a financial institution will typically conduct its own investment analysis, whilst a private individual may make use of the services of a financial advisor or a financial institution which offers portfolio management services. Holding a portfolio is part of an investment and risk-limiting strategy called diversification. By owning several assets, certain types of risk can be reduced. The assets in the portfolio could include stocks, bonds, options, warrants, gold certificates, real estate, futures contracts, production facilities, or any other item that is expected to retain its value.

Index Terms - Diversification, Financial Institution, Portfolio Management.

## INTRODUCTION

Portfolio management is all about strengths, weakness, opportunity, threats in the choice of debt, vs., equity, domestic, vs., international vs., growth vs., safety, and numerous other trades-offs encountered in the attempt to maximize return at a given appetite for risk. Thus it seems logical that the expected return on a portfolio should depend on the expected return of each of the security contained in the portfolio. Portfolio analysis considers the determination of future risk and return in holding various blends of individual securities.

## OBJECTIVES

The main objectives of the study are to analyze the risk and return characteristics of individual securities, to calculate correlation coefficient for different portfolios and to explain the construction of a portfolio.

## RESEARCH METHODOLOGY

Here, the exploratory research is used to execute the study. Exploratory research is generally carried out by studying secondary sources. The Secondary data is obtained from reference textbooks and various websites.

## COMPANY PROFILE

India Info line Ltd: It is listed on both the leading stock exchanges in India, viz. the Stock Exchange, Mumbai (BSE) and the National Stock Exchange (NSE) and is also a member of both the exchanges. It is engaged in the businesses of Equities broking, Wealth Advisory Services and Portfolio Management Services. It offers broking services in the Cash and Derivatives segments of the NSE as well as the Cash segment of the BSE. It is registered with NSDL as well as CDSL as a depository participant, providing a one-stop solution for clients trading in the equities market.

## DATA ANALYSIS AND INTERPRETATION

Average returns: The arithmetic average measures the central tendency. The main objective of averaging is to arrive at a single value, which is a representative of the characteristics of the entire mass of data and arithmetic average or mean of a series (usually denoted by $x$ ) is the value obtained by dividing the sum of the values of various items in a series (sigma $x$ ) divided by the number of items ( N ) constituting the series.

Thus, if $\mathrm{X} 1 . \mathrm{X} 2 \ldots \mathrm{Xn}$ are the given N observations. Then, $\mathrm{X}=\mathrm{X} 1+\mathrm{X} 2+\ldots \mathrm{Xn} / \mathrm{N}$
Return $=$ Closing Price - Opening Price $/$ Opening Price * 100
Standard Deviation: S.D may be defined as "Root Mean Square Deviation from Mean"

For a set of N observations X1, X2 ...Xn with mean X, Deviations from Mean: (X1-X), (X2-X), ...(Xn-X)
Variance: Variance $=(\mathrm{S} . \mathrm{D})^{2}$; Variance $=(1 /(\mathrm{n}-1)$ * $\sum(\mathrm{R}-\mathrm{r})^{2} \mathrm{~T}=1$

Correlation: Correlation is a statistical technique, which measures and analyses the degree or extent to which two or more variables fluctuate with reference to one another. An correlation coefficient between two variables X \& Y usually denoted by ' $r$ ' is a measure of linear relationship and is defined as the ratio of the covariance between X and Y written as $\operatorname{Cov}(\mathrm{X}, \mathrm{Y})$ to the product of standard deviation of X and Y .
Symbolically, $r=\operatorname{Cov}(X, Y) /$ S.D of X, Y
$=\sum X Y / N$
Where, $\mathrm{x}=\mathrm{X}-\mathrm{X}, \mathrm{y}=\mathrm{Y}-\mathrm{Y}$
$\sum \mathrm{XY}=$ sum of the product of deviations in X and Y series calculated with reference to their arithmetic means.
$\mathrm{X}=$ standard deviation of the series $\mathrm{X}, \mathrm{Y}=$ standard deviation of the series Y.
A maximum expected return: n
$\mathrm{Rp}=\sum \mathrm{X} 1 \mathrm{R} 1$
$\mathrm{T}=1$
To solve the above set of equations, analyst need the data estimates on S.D and expected returns for all ' $n$ ' securities along with the correlation coefficient between all possible securities pairs.
In order to know the return of each stock or security, the formula, which is used, is given.

Closing price-Opening price
R: ---------------------------------------*100
Opening Price
To know the average ( R ) the following formula has been used.
$\operatorname{Average}(\mathrm{R})=\stackrel{\sum \mathrm{R}}{\mathrm{N}}$

The next step is to know the risk of the stock or security, the following formula is used.
S.D $=\sqrt{ }$ variance

Variance $=1 / n-1 \sum(\mathrm{R}-\mathrm{r})^{2}$
T=1
Where; (R-R) ${ }^{2}=$ squares of difference between sample and mean.
$\mathrm{N}=$ Number of sample observation.
After that, the correlation of the securities is calculated by using the following formula.
Co-Variance $($ COVAB $)=1 / n \sum($ RA-RA $)(R B-R B)$
$\mathrm{T}=1$
Where, (RA-RA) $($ RB-RB $)=$ combined deviations of A\&B
$(\sigma \mathrm{A})(\sigma \mathrm{B})=$ standard deviation of A\&B
COVAB =Covariance between $\mathrm{A} \& B ; \mathrm{N}=$ no of observation
The next would be the construction of the optimal portfolio on the basis of what Percentage of investment should be invested when two securities and stocks are combined i.e., calculation of two assets portfolio weights by using minimum variance equation, which is given below.
Where, WA= proportion of investment in $\mathrm{A}, \mathrm{WB}=$ proportion of investment in B
The next and final step is to calculate the portfolio risk (combined risk) that shows how much is the risk is reduced by combining two stocks or securities by using the formula.

Formula:
Where.
$\sigma \mathrm{A}=$ Standard Deviation of security A; WA $=$ portfolio of investment s securities A
$\sigma \mathrm{B}=$ Standard Deviation of security B ; WB= proportion of investment in security $B$
$\mathrm{rAB}=$ Correlation coefficient between security $\mathrm{A} \& B$.

|  |  | Total | 11.6390 |  | Total | 135.2581 |

Total number of trading days in the month of Standard Deviation $=\sqrt{ } \sigma^{2}$

September-2019 (n) $=20$
Total returns $=11.6390$
Average returns ( $r$ ) $=$ Total Returns/No. of trading days

$$
\begin{aligned}
& =0.5819 \\
& =\left(1 /(\mathrm{n}-1) * \sum(\mathrm{R}-\mathrm{r})^{2}\right. \\
& =1 /(20-1) * 135.2581 \\
& =7.1188
\end{aligned}
$$

Variance $\left(\sigma^{2}\right) \quad=\left(1 /(\mathrm{n}-1) * \sum(\mathrm{R}-\mathrm{r})^{2}\right.$
$=\sqrt{ }(7.1188)$
$=2.6681$
Interpretation: The calculated total return of Reliance Petroleum ltd is 11.6390 and square deviation is 135.2581. Thus, the Average Returns of Reliance Petroleum Ltd for the month of September-2019 is 58.19 and Standard Deviation (Risk) is 2.6681

\end{aligned}
$$

Interpretation: Here the standard deviation of Reliance Petroleum Ltd is 2.6681 whereas standard deviation of ACC Ltd is 2.1226 . Calculated Covariance for the equities of Reliance Petroleum Ltd \&ACC Ltd is 3.8264 and calculated Correlation Coefficient between
the equities Reliance Petroleum Ltd \& ACC Ltd is 0.6757
4.11 COMPARISION OF RETURNS \& RISK OF INDIVIDUAL SECURITIES

| COMPANY | RETURN | RISK |
| :--- | :--- | :--- |
| ACC Ltd. | $46.82 \%$ | 2.1226 |
| Bajaj Auto Ltd. | $48.83 \%$ | 2.7566 |
| Cipla Ltd. | $87.24 \%$ | 1.7532 |
| Dr.Reddy's Ltd. | $92.66 \%$ | 3.7244 |

| Reliance <br> Petroleum Ltd. | $58.19 \%$ | 2.6681 |
| :--- | :--- | :--- |

Interpretation: In this particular securities Dr.Reddy's Ltd. has the highest risk of 3.7244 when compared with other securities followed by Bajaj Auto Ltd. 2.7566, Reliance Petroleum 2.6681, ACC Ltd. 2.1226 and Cipla Ltd. 1.7532. Dr.Reddy's Company Ltd. has highest returns of $92.66 \%$ when compared with the remaining companies. For instance, the reason behind this is their high sales or expanded business. The ACC Company has lowest returns of $46.82 \%$ because of their low sales.
4.12 COMPARISION OF COVARIANCE \&CORRELATION COEFFICIENT FOR DIFFERENT PORTFOLIOS

| COMPANIES | COVARIANCE | CORRELATION <br> COEFFICIENT |
| :--- | :--- | :--- |
|  <br> Bajaj Auto Ltd. | 0.9492 | 0.1622 |
| Bajaj Auto Ltd. <br> \& Cipla Ltd. | -0.2302 | -0.0476 |
|  <br> Dr.Reddy's <br> Ltd. | 1.1906 | 0.1823 |
| Dr.Reddy's <br> Ltd. \& Reliance <br> Ltd. | 2.2807 | 0.2295 |
|  <br> ACC Ltd. | 3.8264 | 0.6757 |

Interpretation: Here Covariance and Correlation Coefficient of ACC Ltd. \& Bajaj Auto Ltd is 0.9492 \& 0.1622, Bajaj Auto Ltd. \& Cipla Ltd. is -0.2302 \& -
0.0476, Cipla Ltd. \& Dr.Reddy‘s Ltd. is 1.1906 \& 0.1823 , Dr.Reddy’s Ltd. \& Reliance Ltd. is 2.2807 \& 0.2295 and Reliance Ltd. \& ACC Ltd. is 3.8264 \& 0.6757 .

## FINDINGS

The analysis part of the study reveals the following:

- On observing the average returns of the selected companies, Cipla Ltd. (87.24\%) and Dr. Reddy's Ltd ( $92.66 \%$ ) are performing well, of which Dr. Reddys Ltd. ranks in the first position.
- The standard deviation is least for Cipla Ltd. (1.75) and at the same time, good returns
(87.24\%) which indicate that the best company among the selected companies is Cipla Ltd.
- As far as the correlation coefficients are concerned, the negatively correlated securities are selected as suggested by Markowitz. Accordingly, the best correlation is between Bajaj Ltd. and Cipla Ltd. (-0.1476).
- When portfolio return and portfolio risk are calculated to the above portfolios, it is observed that portfolio return is more for Dr.Reddys ( $92.66 \%$ ) with high risk (3.7244).

## CONCLUSION

- Dr. Reddy's Laboratories Ltd., Cipla Ltd., and Reliance Petroleum Ltd are good to invest because their returns are good when compared to ACC Ltd and Bajaj Auto Ltd.
- As per Standard Deviations Dr.Reddy's has the highest risk security and next highest risk securities are Bajaj Auto Ltd. and Reliance Petroleum Ltd. Cipla Ltd. and ACC Ltd. are having moderate risks.
- As per correlations concerned, the securities of Reliance and Cipla Ltd. are the good combinations because they are having normal returns with normal risk.
- The investor who bears high risk will be getting high returns.
- The investor has to maintain the portfolio of diversified sectors rather than investing in a single sector of different stocks.
- People who are investing in portfolios mostly depend on the advice of their financial advisors, friends, and relatives.
- Most of the investors invest in necessities. They plan to invest in Insurance (LIC \& GIC) and pension fund as these give guaranteed returns and are less risky.
- Most of the investors feel that investing in stock, capital market is of high risk therefore they do not invest in them.
